ABOUT TRACK

Prognostics and health management (PHM) is being used by both academia and industry. PHM has been used mostly for developing many programs for the health analysis of machines (e.g. bearings, shafts, compressors, pumps and gears etc.).

We are organizing an exclusive Track on ***Health Monitoring and Management using Multi Sensors*** in the 1st INTERNATIONAL AND 4TH NATIONAL CONFERENCE ON RELIABILITY AND SAFETY ENGINEERING (INCRS-2018). This Track provides an international forum for presentation of recent developments/innovations on various aspects of ***Health Monitoring and Management***. Scientists and researchers working in the broad areas of Machine Learning Techniques are invited to exchange their ideas/results on the related research fields.

The scope of the track includes, but is not limited to:

Prognostics and health management Techniques for

- Health monitoring of rotating mechanical equipment
- Principles of Multi-sensor Fusion
- Model-based and data driven methods
